

#	DATE	WORK PERFORMED
March 2026		
1	Mon, 02 Mar	Project kick-off; went through the requirements and mapped the candidate verification flow end to end
2	Wed, 04 Mar	Finalised the architecture: async FastAPI backend, Next.js frontend, PostgreSQL, with the AI work split into separate single-purpose agents
3	Thu, 05 Mar	Designed the Postgres schema: a staging table for raw parsed data and a main table for verified candidates, plus interviews, verifications and a skill taxonomy
4	Fri, 06 Mar	Set up the repo, the Python virtualenv, Alembic and the local Postgres, and the base service structure
5	Mon, 09 Mar	Built the FastAPI application factory, the pydantic settings layer and the async SQLAlchemy engine and session
6	Tue, 10 Mar	Added the SQLAlchemy models for candidates_staging and candidates_main with UUID primary keys and JSONB columns for the parsed profile and analysis
7	Wed, 11 Mar	Added the interview, interview_question and verification models with their foreign keys back to the candidate
8	Thu, 12 Mar	Added the skill_taxonomy, uploaded_document and background_task models
9	Fri, 13 Mar	Set up Alembic and wrote the initial migration, including the pg_trgm extension for fuzzy name search
10	Mon, 16 Mar	Built the candidate repository: create and fetch staging, and the staging to main promotion logic
11	Tue, 17 Mar	Built the candidate registration endpoint and service that creates the staging row and generates the candidate ref
12	Wed, 18 Mar	Set up the async background-task handling with a tasks table that the frontend polls for status
13	Fri, 20 Mar	Wired up the OpenAI client wrapper and the base agent structure with the prompt files
14	Mon, 23 Mar	Scaffolded the Next.js app-router frontend and the routing
15	Tue, 24 Mar	Added the shared shadcn UI components and the ky-based API client
16	Wed, 25 Mar	Built the onboarding chat shell and the Zustand stores for the chat and onboarding state
17	Thu, 26 Mar	Worked on the Agent 1 resume-parsing prompt to extract structured fields
18	Mon, 30 Mar	Got Agent 1 parsing resumes into a structured profile with skills, experience and education
19	Tue, 31 Mar	Added vision parsing so scanned and image PDFs go through the vision model instead of plain text extraction
April 2026		
20	Wed, 01 Apr	Normalised the parsed skills against the skill taxonomy so search and matching stay consistent
21	Thu, 02 Apr	Added the resume scoring with sub-scores and the analytics it pulls out
22	Mon, 06 Apr	Wrote the Agent 1 background handler that saves the parsed profile and analysis onto the staging row
23	Tue, 07 Apr	Built the resume-review card so the candidate confirms the parsed profile before continuing
24	Wed, 08 Apr	Started Agent 2 (duplicate detection) using a pg_trgm fuzzy match on name plus email and phone to shortlist candidates
25	Thu, 09 Apr	Finished Agent 2 with the LLM comparison over the shortlist, returning unique, duplicate or uncertain
26	Fri, 10 Apr	Added the promotion from staging into the main talent pool once a candidate clears the duplicate check
27	Mon, 13 Apr	Started Agent 3 (ID verification), sending the document image through the vision model
28	Tue, 14 Apr	Handled Aadhaar, PAN and Passport with the mandatory-document ordering
29	Wed, 15 Apr	Added the name and DOB match against the claimed details and the document authenticity confidence
30	Thu, 16 Apr	Built the verification records and the per-document status flow
31	Fri, 17 Apr	Built the ID upload widget with the step-by-step mandatory-document prompts
32	Mon, 20 Apr	Worked on the Agent 4 prompt to generate interview questions from the candidate profile
33	Tue, 21 Apr	Got Agent 4 generating questions targeted at the candidate's actual skills with expected-answer points
34	Wed, 22 Apr	Worked on the Agent 5 scoring prompt and the evaluation rubric
35	Thu, 23 Apr	Finished Agent 5 scoring the transcript into an overall score, the L1 pass/fail and a recommendation
36	Fri, 24 Apr	Wired the interview question and answer loop into the chatbot
37	Mon, 27 Apr	Built the interview recording and transcription UI with the video widget
38	Tue, 28 Apr	Added the scoring task polling and cached the result on the candidate so it loads instantly
39	Wed, 29 Apr	Showed the readiness score, L1 status and recommendation on the result screen
40	Thu, 30 Apr	Added the re-interview controls so an admin can grant another attempt

#	DATE	WORK PERFORMED
May 2026		
41	Mon, 04 May	Reworked the onboarding chatbot into a proper state machine, one step at a time
42	Tue, 05 May	Made the chatbot sessions resumable by persisting the onboarding state to localStorage
43	Wed, 06 May	Added the email lookup and restore so returning candidates pick up exactly where they left off
44	Thu, 07 May	Cleaned up the typed chat message rendering and the flow handling
45	Fri, 08 May	Got the new requirement set from the client, went through it and planned the changes
46	Mon, 11 May	Added the candidate fields they asked for (current CTC, expected CTC, notice period, working status) with the migration
47	Tue, 12 May	Added current and preferred location, and made Aadhaar and PAN mandatory in the ID verification step
48	Wed, 13 May	Added the resume score and the general analytics from the resume (tenure, employment gaps, company-type mix)
49	Thu, 14 May	Captured the Git and LinkedIn URLs and added the LinkedIn vs resume cross check via the Coresignal lookup
50	Fri, 15 May	Added the service vs product company classification, the value-addition check, certifications and the resume pros and cons
51	Mon, 18 May	Stored the interview video link and the full interview context, and made sure everything persists to the DB
52	Tue, 19 May	Added LMS course recommendations for profiles that come from the LMS, and set up Zoho for project tracking
53	Wed, 20 May	Built the hiring manager dashboard with the pool stats, domain breakdown and recent candidates
54	Thu, 21 May	Built the JD search with the weighted mandatory/preferred skill-match ranking and the candidate detail page
55	Fri, 22 May	Wrapped up the candidate data-model changes and ran the migrations
56	Mon, 25 May	Interview as a Service: Set up the HeyGen LiveAvatar account and got the streaming API key
57	Tue, 26 May	Interview as a Service: Did a basic LiveAvatar demo, got the avatar WebRTC stream rendering in the browser
58	Wed, 27 May	Tidied up the hiring manager search, added pagination and the filters
59	Thu, 28 May	Interview as a Service: Got the avatar to speak by sending text through the LiveAvatar session repeat call
60	Fri, 29 May	Interview as a Service: Fixed the avatar going silent; it was calling repeat before the session reached the connected state, so I fixed the event timing
June 2026		
61	Mon, 01 Jun	Interview as a Service: Hooked up Deepgram nova-2 streaming speech to text over a websocket for the candidate audio
62	Tue, 02 Jun	Interview as a Service: Got the realtime transcript working with the avatar, handling the interim and final results
63	Wed, 03 Jun	Interview as a Service: Wired the basic question and follow-up loop, sending the transcript to the model and the reply back to the avatar
64	Thu, 04 Jun	Got LMS access from the team and went through how SmartRecruitz would plug into it
65	Fri, 05 Jun	Started the LMS integration: built the recruitment module and the candidate to LMS-user mapping table
66	Mon, 08 Jun	Wired the approval flow and the short-lived token handoff between the LMS and SmartRecruitz
67	Tue, 09 Jun	Started merging the SmartRecruitz database into the LMS Postgres database
68	Wed, 10 Jun	Moved the tables into the LMS application schema with the lms_recruit_ prefix and matched their naming conventions
69	Thu, 11 Jun	Pointed the FastAPI backend at the shared LMS database, updated the models, FKs and the Alembic version schema, and verified it still worked
70	Fri, 12 Jun	Wired the location filter into the hiring manager search, matching current or preferred location
71	Mon, 15 Jun	Started the standalone auth: argon2 password hashing and HS256 JWTs, and set up the Google sign in
72	Tue, 16 Jun	Finished the auth: the hiring manager login, the get_current_user dependency and the route guards
73	Wed, 17 Jun	Interview as a Service: Tested the LiveAvatar interview demo end to end
74	Thu, 18 Jun	Stabilised both apps, sorted the env config and the run scripts, and wrote up the docs
75	Fri, 19 Jun	Added the Google sign in for both candidates and hiring managers, with the intent-based OAuth callback assigning the role
