

PRODUCT REQUIREMENT DOCUMENT (PRD)

Smart Recruitz Platform (SRP) _ A New Gen Platform.

Single Source of Truth for Verified Talent, Interview Readiness, and Enterprise Hiring Confidence.

Product / Platform Name:

SMART RECRUITZ

Enterprise Talent Infrastructure Platform

Owning Company:

ZENNIAL PRO

PRIVATE LIMITED

Document Type:

Enterprise Product Requirements
Document (e-PRD).

Document Purpose: This document serves as the authoritative reference for defining the vision, scope, architecture, functional requirements, non-functional expectations, and execution strategy of the Smart Recruitz Platform. It is intended to align leadership, product, design, engineering, QA, sales, and marketing teams across the full product lifecycle.

PRD Developed By:

Chromezy Consulting

Engagement Nature:

Hiring Trust Layer / Workforce Enablement

Intended Audience: Product Leadership, Engineering, UX, QA, Security, Sales, Marketing.

Confidentiality Notice:

This document contains proprietary and confidential information of **ZennialPro Private Limited**. Unauthorized use, reproduction, or distribution of this document or its contents is strictly prohibited.

Confidentiality Note:

This document contains confidential and proprietary information related to the Smart Recruitz Platform. It is intended solely for internal stakeholders and authorized partners involved in product planning, design, development, and execution. Unauthorized access, disclosure, reproduction, or distribution of this document, in whole or in part, is strictly prohibited. All information herein is subject to change based on strategic, technical, or regulatory considerations and must be handled in accordance with organizational confidentiality guidelines.

1. DOCUMENT CONTROL & GOVERNANCE -

1.1 Document Purpose & Authority

This Product Requirement Document (PRD) serves as the authoritative and governing reference for the Smart Recruitz Platform. It defines the product vision, scope, strategic intent, functional and non-functional requirements, execution principles, and governance mechanisms required to design, develop, deploy, and evolve the platform.

This PRD is intended to:

- ↵ Establish a single source of truth for all product-related decisions.
- ↵ Align leadership, product, design, engineering, QA, security, sales, and marketing teams.
- ↵ Provide structured guidance across the entire product lifecycle, from inception to scale.
- ↵ Enable controlled iteration, prioritization, and release planning.

All downstream artifacts—including UX designs, technical architecture documents, sprint backlogs, test plans, release notes, and go-to-market materials—must be logically traceable to this PRD. In the event of any conflict between this PRD and derivative documents, this PRD shall prevail, unless explicitly superseded through the defined governance process.

1.2 Document Ownership

Ownership of this PRD is centralized under the Product function to ensure consistency, accountability, and strategic alignment.

Supporting Stakeholders:

- **Product Leadership:** Strategic direction, major scope approvals, and long-term alignment.
- **Engineering Leadership:** Feasibility validation and implementation alignment.
- **Design Leadership:** Experience consistency and usability alignment.
- **QA & Compliance:** Testability, quality benchmarks, and enterprise readiness.
- **Business & GTM Leadership:** Market alignment and positioning inputs.

While multiple stakeholders contribute inputs, final authority for content inclusion, modification, or removal rests with the Product Owner, subject to the governance model defined below.

1.3 Governance Model

This PRD follows a controlled governance model designed to balance execution agility with enterprise-grade discipline.

Governance Principles	Governance Structure
- Product intent is defined once and refined incrementally. - Capabilities are prioritized over features. - Changes are deliberate, documented, and traceable. - Strategic alignment takes precedence over tactical expediency.	- The PRD is maintained as a living document, versioned and reviewed at defined milestones. - All material changes require review and approval as per change classification. - No informal or undocumented changes are permitted.

This governance model ensures that Smart Recruitz evolves as a cohesive platform, rather than a collection of disconnected enhancements.

1.4 Change Management & Versioning

All modifications to this PRD are subject to structured change management to preserve clarity, accountability, and historical context.

Change Classification & Approval:

Change Type	Description	Approval Authority
Minor Clarifications	Language refinement, formatting, non-scope-impacting updates	Product Owner
Functional Adjustments	Feature or workflow changes within approved scope	Product Owner + Engineering Lead
Scope Expansion / Reduction	Addition or removal of capabilities	Product Leadership
Strategic Direction Change	Vision, positioning, or core product thesis	Leadership Steering Committee

Versioning Guidelines:

- Each approved change results in a version increment.
- Major releases require a new major or minor version.
- All changes must be logged with rationale and effective date.

This approach ensures transparency while allowing the product to adapt to validated learnings and market realities.

2. DISCLAIMER –

This document contains confidential and proprietary information belonging to ZennialPro Private Limited.

The contents of this PRD are intended solely for:

- Internal teams of ZennialPro.
- Authorized partners and stakeholders engaged in the Smart Recruitz Platform.

Unauthorized access, disclosure, reproduction, or distribution of this document, in whole or in part, is strictly prohibited. The information contained herein reflects the product direction and intent at the time of preparation and is subject to change based on feasibility assessments, stakeholder inputs, regulatory considerations, and market feedback.

3. EXECUTIVE SUMMARY –

Hiring at scale is fundamentally constrained—not by availability of talent, but by the absence of trust, verification, and standardized evaluation across the hiring lifecycle.

The Smart Recruitz Platform is conceived as a Verified Talent Infrastructure, designed to replace resume-centric hiring with data-backed, continuously validated candidate profiles. Unlike traditional recruitment platforms or applicant tracking systems that focus on managing resumes and recruiter workflows, Smart Recruitz focuses on establishing trust in talent before hiring decisions are made.

The Platform Enables;

- Verified representation of candidate identity, skills, and experience
- Standardized early-stage (L1) interview validation
- Elimination of resume fraud, duplication, and inconsistent screening
- Creation of reusable, enterprise-ready candidate profiles
- Significant reduction in hiring cycle time and operational risk

Smart Recruitz is architected to function as:

- A standalone enterprise platform.
- A deeply integrable layer with internal systems such as Learning Management Systems (LMS), enabling seamless transition from learning completion to hiring readiness.
- A foundational trust layer supporting future workforce enablement and hiring ecosystems.

This PRD defines the comprehensive product scope, execution strategy, functional architecture, non-functional expectations, and governance framework required to build and scale Smart Recruitz as a premium, enterprise-grade platform.

4. EXECUTIVE PRODUCT OVERVIEW –

4.1 Product Vision

The vision of the Smart Recruitz Platform is to become the default trust layer for enterprise hiring, where hiring decisions are driven by verified capability signals rather than self-declared resumes.

Smart Recruitz envisions a future in which:

- Talent is represented through living, auditable digital profiles
- Early-stage candidate validation is standardized and reusable
- Enterprises consume trusted talent data, not claims or documents
- Hiring becomes faster, more consistent, and less risk-prone at scale

The platform is not intended to compete with job portals or applicant tracking systems. Instead, it is designed to sit upstream of hiring decisions, ensuring that only verified, interview-ready talent enters enterprise hiring workflows.

4.2 Problem Statement

Despite decades of HR technology adoption, enterprise hiring continues to suffer from structural inefficiencies rooted in outdated constructs.

As organizations scale, these issues compound—leading to:

- Longer hiring cycles.
- Higher mis-hire risk.
- Redundant interviews.
- Fragmented talent data across systems.

The fundamental issue is not talent availability, but the absence of a reliable trust framework in hiring.

4.3 Strategic Intent

The strategic intent of Smart Recruitz is to redefine how talent is represented, validated, and consumed by enterprises.

The platform is intentionally positioned to:

- Replace resumes with verified, data-rich candidate dashboards.
- Standardize L1 validation through structured interview and assessment signals.
- Eliminate redundancy by enabling reusable candidate profiles across employers.
- Integrate seamlessly with internal systems such as LMS to convert learning outcomes into hiring readiness.
- Act as infrastructure, not a transactional marketplace or recruiter tool.

Smart Recruitz is built to serve:

Enterprises seeking scalable, consistent hiring standards

Candidates seeking fair, evidence-based evaluation

Ecosystem partners requiring reliable workforce pipelines

This strategic intent informs all product decisions, capability prioritization, and execution trade-offs documented in this PRD.

4.4 Guiding Principles

The following principles govern the design, development, and evolution of the Smart Recruitz Platform. These principles are **non-negotiable** and must be referenced when evaluating scope changes or implementation decisions.

Trust Over Volume

Reusability by Design

Evidence Over Claims

Enterprise-First Thinking

Capability Before Features

Composable, Not Coupled

Clarity Over Cleverness

5. MARKET, OPPORTUNITY & STRATEGIC CONTEXT –

5.1 Market Landscape Overview

The global hiring and talent acquisition market has evolved significantly over the past decade, with widespread adoption of Applicant Tracking Systems (ATS), job portals, recruitment marketplaces, and assessment tools. However, despite increased tooling, enterprises continue to experience inefficiencies, inconsistencies, and risk across hiring workflows.

The current market landscape is characterized by:

- Resume-centric sourcing and screening.
- Fragmented hiring workflows distributed across multiple tools.
- Heavy dependency on recruiters for early-stage evaluation.
- Limited standardization of candidate validation.
- Increasing prevalence of resume fraud and duplicate profiles.

Most existing solutions focus on optimizing hiring logistics, not on establishing trust in talent data. As hiring becomes more distributed, remote, and skills-driven, the limitations of resume-based systems are becoming more pronounced.

This creates a clear gap for platforms that address verification, standardization, and reusability of talent signals—a gap that Smart Recruitz is explicitly designed to fill.

5.2 Market Opportunity

The opportunity for Smart Recruitz lies at the intersection of multiple high-growth enterprise domains:

Enterprises are increasingly seeking:

- Faster hiring cycles without compromising quality
- Reduction in hiring risk and mis-hires
- Consistent hiring standards across teams and geographies
- Evidence-based evaluation of skills and readiness

NOTE:

Additionally, the rise of LMS-driven upskilling and reskilling initiatives has created a need for **direct pathways from learning outcomes to employability**. Smart Recruitz leverages this shift by integrating learning completion signals into verified hiring readiness profiles. This convergence creates a strong opportunity for Smart Recruitz to establish itself as **foundational infrastructure**, rather than a replaceable point solution.

5.3 Target Segments

Smart Recruitz is designed to serve clearly defined enterprise and ecosystem segments.

The platform intentionally avoids mass-market job-seeker volume plays and focuses on enterprise-aligned, validation-driven hiring scenarios.

5.4 Product Positioning

Smart Recruitz is positioned as a Verified Talent Infrastructure Platform, not as:

Positioning Statement:

Smart Recruitz enables enterprises to consume verified, interview-ready talent profiles through standardized validation and trust mechanisms—reducing hiring time, cost, and risk.

Key positioning differentiators:

- Replaces resumes with verified dashboards
- Standardizes L1 interviews and readiness signals
- Eliminates duplicate and fraudulent profiles
- Integrates seamlessly with LMS and enterprise systems
- Acts as a reusable trust layer across hiring cycles

This **positioning guides** all product messaging, sales narratives, and implementation decisions.

5.5 SWOT Analysis (High – Level)

5.6 Strategic Implementations

The market context has direct implications for how Smart Recruitz must be built and executed:

- The product must lead with education and enablement, not just features.
- Trust and verification capabilities must be robust from Day 1.
- Integration readiness is a strategic requirement, not an enhancement.
- Early enterprise pilots must demonstrate measurable impact.
- Positioning discipline is critical to avoid being misclassified as an ATS.

6. PRODUCT SCOPE DEFINITION –

6.1 Scope Definition Overview

This section defines the explicit scope boundaries of the Smart Recruitz Platform for the current product lifecycle phase. It clarifies what the platform will deliver, what it will intentionally not attempt, and how scope decisions must be interpreted across teams.

The scope definition is guided by:

- The product vision and strategic intent outlined in Section 4.
- Market and positioning context outlined in Section 5.
- The platform's role as verified talent infrastructure, not a transactional recruitment system.

All product, design, and engineering decisions must align with this scope definition. Any deviation requires formal review under the governance model defined in Section 1.

6.2 In-Scope Capabilities

The following capabilities are explicitly in scope for the Smart Recruitz Platform. These represent the foundational functions required to establish trust, standardization, and enterprise readiness in hiring.

6.2.1 Candidate Identity & Trust Foundation

- Verified candidate identity onboarding.
- Credential and qualification validation inputs.
- Unique candidate profile creation and integrity controls.
- Representation of verified skills, experience, and readiness indicators.
- Structured and auditable candidate information model.
- Continuous profile updates based on validation events.

6.2.2 Skill & Experience Signal Management

- Mapping of candidate skills to defined role or industry standards.
- Representation of experience through validated timelines or artifacts.
- Normalized skill indicators for comparability across candidates.

6.2.3 Interview & Readiness Validation (L1)

- Integration with structured L1 interview processes.
- Capture of interview outcomes and readiness scores.
- Standardized evaluation signals independent of individual recruiters.
- Elevation of candidates into validated talent pools post-clearance.

6.2.4 Talent Pooling & Discovery

- Creation of curated, verified talent pools.
- Classification of candidates based on readiness and role alignment.
- Controlled access to enterprise consumers of talent data.

6.2.5 LMS Integration & Learning-to-Hiring Flow

- Integration with Learning Management Systems (LMS)
- Automatic profile initiation or enrichment upon course completion
- Translation of learning outcomes into hiring readiness signals

6.2.6 Enterprise Administration & Governance

- Enterprise-level configuration and access controls.
- Auditability of candidate data and validation history.
- Role-based access for internal and enterprise users.

6.2.7 Enterprise Administration & Governance

- Enterprise-level configuration and access controls.
- Auditability of candidate data and validation history.
- Role-based access for internal and enterprise users.

6.2.8 Reporting & Operational Visibility (Foundational)

- High-level visibility into candidate readiness pipelines.
- Operational metrics related to validation and talent pools.
- Data availability for future analytics expansion.

6.3 Out-Scope Capabilities

The following capabilities are explicitly out of scope for the Smart Recruitz Platform in the current phase. These exclusions are intentional and strategic.

6.3.1 Job Marketplace & Open Job Boards

- Public job postings.
- Candidate-driven job applications.
- Employer branding or job promotion features.

Continued 6.3.2 (6.3 Out-Scope Capabilities), from next page →

6.3.2 Applicant Tracking System (ATS) Functionality

- End-to-end requisition management.
- Offer management and onboarding workflows.
- Interview scheduling beyond validation integration.
- Hiring pipeline ownership post-L1 validation.

6.3.3 Recruiter Productivity Tools

- Resume parsing or optimization.
- Recruiter task management.
- Outreach or candidate communication tooling.

6.3.4 Payroll, HRMS, or Employment Administration

- Compensation management.
- Employee lifecycle management.
- Compliance or statutory employment processing.

6.3.5 Advanced AI Decision-Making (Autonomous)

- Automated hiring decisions.
- AI-driven candidate selection without human oversight.
- Predictive hiring outcomes beyond readiness indicators.

Note

Any request to include out-of-scope capabilities must be evaluated against:

- Product vision and guiding principles.
- Market positioning risks.
- Delivery complexity and focus dilution.

Such requests must follow the change management process defined in Section 1.4.

7. PRODUCT SCOPE DEFINITION –

7.1 Purpose of the Matrix

The purpose of this Stakeholder & Responsibility Matrix is to establish clear ownership, accountability, and decision authority across all functions involved in the development, deployment, and evolution of the Smart Recruitz Platform.

This matrix ensures that:

- Responsibilities are unambiguous.
- Decision-making authority is clearly defined.
- Cross-functional dependencies are visible.
- Escalation paths are structured and predictable.

All stakeholders are expected to operate within the boundaries defined in this section.

7.2 Key Stakeholder Groups

Each stakeholder group contributes to the platform's success while operating under a unified product governance framework.

7.3 Escalation & Conflict Resolution

To ensure timely resolution of issues and prevent execution delays, the following escalation hierarchy applies:

Conflict resolution principles:

- Product vision and scope take precedence.
- Enterprise readiness is non-negotiable.
- Decisions are documented and traceable.

7.4 Accountability Expectation

All stakeholders are expected to:

- Operate within defined scope and responsibilities.
- Actively communicate risks, dependencies, and constraints.
- Align decisions with the guiding principles outlined in Section 4.
- Respect governance and change management protocols.

7.5 Responsibility Matrix (in Tabular Representation)

The table below outlines functional ownership and accountability across major product activities.

Activity / Area	Product	Engineering	Design	QA	Business	Leadership
Product Vision & Strategy	A	C	C	I	C	A
Scope Definition & Control	A	C	I	I	I	C
Capability Definition	A	C	C	I	I	I
Functional Requirements	A	C	C	C	I	I
Architecture & Technical Design	C	A	I	C	I	I
UX & Experience Design	C	I	A	C	I	I
Development & Implementation	I	A	I	C	I	I
Quality Assurance & Validation	C	C	I	A	I	I
Security & Compliance	C	C	I	A	I	I
Release Planning	A	C	I	C	C	I
Go-To-Market Enablement	C	I	I	I	A	C
Customer Feedback & Iteration	A	C	C	C	C	I

Legend:

A = Accountable

C = Consulted

I = Informed

7.6 Review & Update Responsibility

This Stakeholder & Responsibility Matrix must be:

- Reviewed at the start of each major product phase.
- Updated when new stakeholder groups are introduced.
- Revalidated during major organizational or strategic changes.

8. USER PERSONAS & STAKEHOLDER PROFILES –

8.1 Persona Definition Overview

This section defines the primary and secondary personas that interact with or are impacted by the Smart Recruitiz Platform. Personas are defined based on functional roles, objectives, and decision-making responsibilities, not on demographics.

The purpose of these personas is to:

- Anchor product decisions in real user needs.
- Guide UX, workflow, and interaction design.
- Ensure functional requirements map to concrete outcomes.
- Align go-to-market messaging with stakeholder expectations.

All personas defined below must be considered during capability design, functional prioritization, and validation planning.

8.2 Primary Personas vs Secondary Personas

8.3 Stakeholder Needs & Expectations

Stakeholder	Primary Need	Platform Expectation
Enterprise Employers	Trust & consistency	Verified, ready-to-hire talent
Candidates	Fair evaluation	Evidence-based profiles
LMS Providers	Outcome visibility	Learning-to-hiring linkage
Interview Ops	Standardization	Structured validation workflows
Leadership	Strategic leverage	Scalable infrastructure

8.4 Primary Personas

ROLE OVERVIEW:

Responsible for ensuring timely, consistent, and risk-mitigated hiring across teams or business units.

Enterprise Talent Acquisition (TA) Lead / Hiring Manager.

CORE OBJECTIVES:

- Reduce time-to-hire without compromising quality.
- Ensure standardized evaluation across teams.
- Minimize resume fraud and duplicate screening.
- Improve predictability of hiring outcomes.

CURRENT PAIN POINTS:

- Inconsistent candidate quality from resumes.
- High dependency on recruiters for screening.
- Repeated interviews for similar roles.
- Limited visibility into candidate readiness.

WHAT SMART RECRUITZ ENABLES:

- Access to verified, interview-ready candidate profiles.
- Confidence in candidate data and evaluation signals.
- Reduced early-stage screening effort.
- Faster, more consistent hiring decisions.

SUCCESS INDICATORS:

Reduced hiring cycle time | Lower interview drop-offs | Improved hiring manager satisfaction

ROLE OVERVIEW:

An individual seeking employment or advancement through fair, evidence-based evaluation.

Candidate (Job-Ready / Learning-to-Hire)

CORE OBJECTIVES:

- Be evaluated on actual skills, qualifications & job readiness.
- Avoid repeated interviews and resume rejections.
- Gain visibility into employability status – all in one platform.

CURRENT PAIN POINTS:

- Resume-based shortlisting bias.
- Repeated screening interviews.
- Lack of feedback or transparency.
- Difficulty translating learning into jobs.

WHAT SMART RECRUITZ ENABLES:

- A verified, reusable professional profile.
- Fair evaluation based on validated signals.
- Clear readiness indicators for employers.
- Seamless transition from learning to hiring.

SUCCESS INDICATORS:

Reduced interview repetition | Faster access to relevant opportunities | Improved hiring transparency

ROLE OVERVIEW:

Teams or partners responsible for conducting structured, standardized L1 interviews and assessments.

CORE OBJECTIVES:

- Deliver consistent, objective evaluations & positive impact.
- Scale interview operations efficiently & download reports.
- Maintain evaluation quality, efficiency and scoring data.

SUCCESS INDICATORS:

Interview consistency | Reduced rework | Clear evaluation traceability.

Interview Operations / L1 Validation Team

CURRENT PAIN POINTS:

- Inconsistent interview frameworks
- Subjective Evaluations and analytics dashboards.
- Manual Coordination and Reporting.
- Live Information of Candidates for Recruiters.

WHAT SMART RECRUITZ ENABLES:

- Standardized interview workflows.
- Structured scoring and outcome capture.
- Reusable evaluation signals & faster hiring.
- Seamless, unified architecture platform.

ROLE OVERVIEW:

Manages learning programs aimed at improving employability outcomes.

CORE OBJECTIVES:

- Demonstrate placement or employability impact.
- Convert course completion into job readiness & directly apply in Smart Recruitiz and check status.
- Provide value beyond certifications & make recruitment faster with data, dashboarding and info.

SUCCESS INDICATORS:

Placement conversion rates | Employer engagement | Learner satisfaction | Help Companies get Employee Faster.

LMS Administrator / Training Program Owner.

CURRENT PAIN POINTS:

- Limited linkage between learning and hiring.
- Poor visibility into learner outcomes.
- Manual handoffs to hiring platforms.
- No single window. Multiple platform switches.

WHAT SMART RECRUITZ ENABLES:

- Automated transition from learning to hiring readiness.
- Outcome-driven program evaluation.
- Stronger enterprise partnerships.
- Filter Candidate and help recruiter find best employee.

8.5 Secondary Personas

Product & Engineering Teams (<i>Internal</i>)	Clear scope and capability definitions Stable requirements and governance Traceable decisions.	1
Business, Sales & Partnerships	Clear product narrative Differentiated positioning Enterprise-ready value propositions.	2
Executive Leadership (CEO, CXOs, etc)	Strategic alignment Risk mitigation Scalable platform vision Data-Driven Decision Making.	3

9. USER JOURNEYS & HIGH-LEVEL WORKFLOWS –

9.1 Journey Mapping Overview

This section outlines the **end-to-end user journeys and system workflows** across the Smart Recruitz Platform. The purpose of these journeys is to:

- Establish a common understanding of how users interact with the platform.
- Clarify the sequence of actions, system responses, and validation events.
- Identify integration touchpoints and decision gates.
- Guide UX design, functional requirements, and test scenarios.

9.2 Candidate Journey

The Candidate Journey defines how an individual transitions from onboarding to verified, interview-ready status within the Smart Recruitz Platform.

High Level Flow:

9.3 Enterprise / Employer Journey

The Enterprise Journey defines how employers consume verified talent data and make informed hiring decisions.

High Level Flow:

9.4 LMS-to-Hiring Journey

This journey defines the integration between Learning Management Systems (LMS) and Smart Recruitz, enabling a seamless transition from learning to employability.

High Level Flow:

9.5 Interview & Validation Journey

This journey outlines the standardized L1 interview and validation process that underpins trust.

High Level Flow:

Next Page, Section 10: PRODUCT CAPABILITIES & FEATURE SET. Continued →

10.PRODUCT CAPABILITIES & FEATURE SET –

10.1 Capability Overview

The Smart Recruitz Platform is organized around a set of **core product capabilities** that collectively establish it as a **Verified Talent Infrastructure**, rather than a transactional recruitment system.

Capabilities are defined as:

- Outcome-oriented system abilities.
- Stable over time, even as features evolve.
- Aligned to enterprise hiring realities.
- Directly traceable to user journeys and personas.

Each capability may be implemented through multiple features and workflows, but **capabilities—not features—represent the long-term product contract.**

10.2 Capability Breakdown

Capability	Purpose	Core Functional Elements	Primary Outcomes	Key Execution Notes
Candidate Identity & Trust Foundation	Establish a unique, verified candidate identity	Identity onboarding Credential capture Duplicate detection Integrity checks	Fraud-free profiles Single source of truth	Verification is mandatory; integrity checks must be continuous
Verified Candidate Profile & Dashboard	Replace resumes with evidence-based profiles	Structured profile model Validated skills & experience Readiness indicators	Comparable, auditable candidate profiles	Claims must always be backed by validation signals
Skill & Experience Signal Engine	Normalize skills and experience for comparison	Skill taxonomy mapping Experience normalization Role alignment	Faster, objective shortlisting	Prefer structured data over free text
Interview & Readiness Validation (L1)	Standardize early-stage candidate evaluation	Interview eligibility logic Standard frameworks Objective scoring	Consistent readiness assessment	Scoring transparency is critical
Talent Pooling & Discovery	Provide enterprises access to verified talent pools	Pool creation & classification Eligibility rules Controlled access	Reduced screening effort. Predictable pipelines	Pools must remain quality-controlled
LMS Integration & Learning-to-Hiring Flow	Convert learning outcomes into hiring readiness	LMS event ingestion Auto profile enrichment Skill mapping	Direct learning-to-hiring linkage	Integration must be loosely coupled
Enterprise Administration & Governance	Enable control, security, and auditability	Role-based access Configuration management Audit logs	Enterprise trust & compliance	Governance is non-negotiable from early releases
Reporting & Operational Visibility (Foundational)	Provide operational insight into talent readiness	Pipeline visibility Validation metrics Pool composition	Data-backed decisions	Focus on clarity, not metric overload

10.3 Capability–Persona Mapping

Capability	Candidate	Enterprise / TA	LMS Admin	Interview Ops	Leadership
Identity & Trust Foundation	✓	✓	–	–	✓
Candidate Dashboard	✓	✓	–	–	✓
Skill & Experience Signals	✓	✓	✓	–	✓
Interview & Validation	✓	✓	–	✓	✓

Enterprise Governance	–	✓	–	–	✓
Reporting & Visibility	–	✓	✓	✓	✓

11.FUNCTIONAL REQUIREMENTS (HIGH-LEVEL) -

11.1 Functional Requirement Philosophy

The functional requirements defined in this section represent what the system must do, not how it will be implemented.

These requirements are:

- Capability-aligned and outcome-driven.
- Platform-level, not UI-specific.
- Designed to guide engineering, QA, and architecture decisions.
- Stable across releases, with controlled iteration.

Detailed technical specifications, API contracts, and UI designs will be derived from these requirements in downstream documents.

Next Page, 11.2 Capability-wise Functional Requirements, Continued →

11.2 Capability-wise Functional Requirements

Capability	Functional Requirement	System Behaviour / Expectation
Candidate Identity & Trust Foundation	Unique candidate onboarding	System must create one unique identity per candidate.
	Identity verification	System must validate identity before profile activation.
	Duplicate detection	System must prevent creation of duplicate profiles.
Verified Candidate Profile & Dashboard	Profile generation	System must generate a structured candidate dashboard.
	Profile updates	System must update profiles based on new validation events
	Audit visibility	System must maintain history of profile changes
Skill & Experience Signal Engine	Skill normalization	System must map skills to defined taxonomies
	Experience representation	System must display experience in normalized timelines
Interview & Readiness Validation (L1)	Interview eligibility	System must determine eligibility for L1 validation.
	Interview outcome capture	System must record structured interview results.
	Readiness scoring	System must compute and update readiness indicators.
Talent Pooling & Discovery	Pool assignment	System must assign candidates to relevant talent pools.
	Pool access control	System must restrict access based on roles.
LMS Integration & Learning-to-Hiring Flow	LMS event ingestion	System must ingest course completion events.
	Profile enrichment	System must enrich profiles using learning data.
Enterprise Administration & Governance	Role-based access	System must enforce access control by role.
	Configuration management	System must support enterprise-level configurations.
Reporting & Operational Visibility	Pipeline visibility	System must provide high-level readiness metrics.
	Validation metrics	System must expose validation throughput data.

11.3 Configuration vs Customization Principles

12.NON-FUNCTIONAL REQUIREMENTS (NFR) -

12.1 Performance & Scalability

This subsection defines how the platform must perform under normal and peak operating conditions.

AREA	REQUIREMENT	EXPECTATION / BENCHMARK
System Responsiveness	Core user actions	User-facing actions should respond within acceptable enterprise UX thresholds
Concurrent Users	Multi-tenant access	Platform must support concurrent enterprise and candidate usage
Data Processing	Validation & scoring	Candidate validation and scoring must complete within defined SLA windows
Scalability	Horizontal scaling	Platform must scale without re-architecture
Growth Readiness	Data & users	Designed to handle exponential growth in profiles and enterprises
Execution Note:	Performance must be validated under realistic enterprise load scenarios, not just functional testing.	

12.2 Security & Compliance

Security is foundational to Smart Recruitz’s positioning as a trust infrastructure.

AREA	REQUIREMENT	EXPECTATION / BENCHMARK
Data Security	Candidate & enterprise data	Data must be encrypted at rest and in transit.
Access Control	Platform Usage	Role-based access control enforced across all modules
Authentication	User Access	Secure authentication mechanisms for all users
Compliance Readiness	Regulatory Alignment	Platform must be designed to align with applicable data protection regulations
Vulnerability Management	Threat Handling	Regular security assessments and remediation
Execution Note:	Security considerations must be embedded from design phase, not treated as a post-build activity.	

12.3 Reliability & Availability

The platform must be dependable for enterprise operations.

AREA	REQUIREMENT	EXPECTATION / BENCHMARK
Uptime	Platform Availability	High availability with minimal planned downtime.
Fault Tolerance	Failure Handline	Graceful degradation under partial failures.
Backup & Recovery	Data Protection	Regular backups with defined recovery objectives.
Incident Handling	Operational Resilience	Clear incident detection and resolution processes
Execution Note:	Availability requirements apply equally to integrations and internal services.	

12.4 Auditability & Logging

Auditability is critical for enterprise trust, compliance, and accountability.

AREA	REQUIREMENT	EXPECTATION / BENCHMARK
Activity Logging	User and System Action	All critical actions must be logged.
Data Traceability	Candidate Data	Ability to trace data changes over time.
Validation History	Trust Signals	Interview and verification events must be auditable
Access Audits	Security oversight	Access attempts and changes must be logged
Execution Note:	Audit logs must be immutable, searchable, and retained per enterprise policies.	

13.INTEGRATION & INTEROPERABILITY REQUIREMENTS -

13.1 Integration Philosophy

Smart Recruitz is designed as a standalone yet composable platform. Integrations are treated as strategic enablers, not hard dependencies. Integration Principles;

- Loose coupling over tight dependency.
- Event-driven data exchange wherever possible.
- Clear data ownership and responsibility boundaries.
- Failure isolation between systems.
- Versioned and backward-compatible interfaces.

13.2 LMS Integration

LMS integration is a core strategic requirement, enabling a seamless transition from learning completion to hiring readiness.

Aspect	Requirement	Expectation
Trigger Events	Course completion	LMS must trigger completion events
Data Exchange	Learning outcomes	Skills, certifications, and completion status
Profile Handling	Creation / enrichment	Auto-create or enrich candidate profiles
Readiness Mapping	Learning-to-skill linkage	Learning outcomes mapped to skill signals
Failure Handling	Event retries	Integration failures must not block LMS ops.

- Integration Scope:
- a. Smart Recruitz consumes LMS events.
 - b. LMS remains the system of record for learning data.
 - c. Smart Recruitz translates learning outcomes into hiring readiness signals.

13.3 ATS / Enterprise System Integration

Smart Recruitz integrates upstream of ATS and HR systems, providing verified talent data without owning downstream hiring workflows.

Aspect	Requirement	Expectation
Integration Direction	Smart Recruitz → ATS	Push or expose verified candidate profiles
Data Scope	Candidate readiness data	Identity, skills, interview outcomes
Workflow Ownership	ATS	ATS controls requisition, offer, onboarding
Synchronization	Controlled data sync	Avoid bidirectional conflicts
Extensibility	Future systems	Integration-ready architecture

- Execution Boundary:
- a. Smart Recruitz does not replace ATS.
 - b. ATS consumes trusted candidate inputs from Smart Recruitz.

13.4 API & Data Exchange Principles

All integrations must adhere to standardized API and data exchange principles.

Aspect	Requirement	Expectation
API Design	Versioned APIs	Backward compatibility maintained
Data Contracts	Defined schemas	Clear input/output definitions
Security	Secure APIs	Authentication and authorization enforced
Rate Limiting	Abuse prevention	Controlled access to APIs
Observability	Monitoring & logs	Integration activity must be traceable

- Data Ownership Rules:
- a. Source systems retain ownership of original data.
 - b. Smart Recruitz owns derived validation and readiness signals.

14. DATA MODEL & INFORMATION ARCHITECTURE -

14.1 Data Model Philosophy

The Smart Recruitz data model is designed to support its role as a Verified Talent Infrastructure. Data is treated as a strategic asset, governed by trust, traceability, and reuse.

Core Principles:

- One candidate = one canonical profile.
- Verification produces derived signals, not overwritten facts.
- Source systems retain ownership of original data.
- All critical data must be traceable and auditable.
- Data models must support reuse across enterprises.

14.2 Core Entities

The following table defines the primary logical entities in the Smart Recruitz Platform.

Entity	Description	Key Attributes (Indicative)
Candidate	Canonical representation of an individual	Candidate ID, identity references, status
Candidate Profile	Structured, verified representation of capability	Skills, experience signals, readiness indicators
Identity & Credentials	Verified identity and qualification records	ID type, verification status, timestamps
Skill Signal	Normalized representation of a skill	Skill ID, level, source, confidence
Experience Signal	Validated experience representation	Role, duration, validation source
Interview Record (L1)	Structured interview outcome	Interview type, score, readiness result
Talent Pool	Curated collection of verified candidates	Pool criteria, eligibility rules
Enterprise	Consuming organization	Enterprise ID, access policies
LMS Event	Learning completion input	Course ID, outcome, completion date
Audit Log	System and user activity trace	Action, actor, timestamp

Note: These entities represent logical concepts. Physical implementation may evolve without changing semantic meaning.

15. SECURITY, PRIVACY & COMPLIANCE CONSIDERATIONS –

- **Data Protection by Design**
All candidate and enterprise data must be protected through encryption in transit and at rest, with security embedded from the earliest design stages.
- **Role-Based Access Control (RBAC)**
Access to data and platform functions must be strictly governed by role-based permissions, ensuring users only access information required for their responsibilities.
- **Privacy & Consent Management**
Candidate data usage must be governed by explicit consent, with clear visibility into how data is used, shared, and retained.
- **Auditability & Traceability**
All critical system actions, data changes, and access events must be logged to support audit, investigation, and compliance needs.
- **Regulatory Alignment Readiness**
The platform must be designed to align with applicable data protection and privacy regulations across geographies, without requiring structural rework.
- **Secure Integration Controls**
All integrations must follow secure data exchange principles, including authentication, authorization, and controlled data exposure.
- **Risk Monitoring & Incident Response**
The platform must support proactive security monitoring and defined incident response mechanisms to detect, contain, and remediate security or privacy risks.

16. CONCLUSIONS AND NEXT STEPS –

The Smart Recruitz Platform is defined in this Product Requirement Document as a Verified Talent Infrastructure, purpose-built to address the fundamental trust gaps in enterprise hiring. By replacing resume-centric evaluation with verified identity, skill, experience, and readiness signals, the platform establishes a scalable, auditable, and enterprise-ready foundation for modern hiring.

This PRD provides:

- ◆ • A clear articulation of product vision, scope, and strategic intent.
- ◆ • Defined capabilities, functional expectations, and non-functional standards.
- ◆ • Strong governance, security, and compliance considerations.
- ◆ • Structured guidance for cross-functional execution and iteration.

The document is designed to function as a single source of truth, ensuring alignment across leadership, product, design, engineering, QA, and go-to-market teams throughout the product lifecycle.

THANK YOU!
